How to Install SQL Server on a Mac

Posted on July 30, 2017 by Ian

Here I'll show you how to get SQL Server up and running on your Mac in less than half an hour. And the best part is, you'll have SQL Server running locally without needing any virtualization software.

Prior to SQL Server 2017, if you wanted to run SQL Server on your Mac, you first had to create a virtual machine (using VirtualBox, Parallels Desktop, VMware Fusion, or Bootcamp), then install Windows onto that VM, then finally SQL Server. This is still a valid option depending on your requirements (here's how to install SQL Server on a Mac with VirtualBox if you'd like to try that method).

Starting with SQL Server 2017, you can now install SQL Server directly on to a Linux machine. And because macOS is Unix based (and Linux is Unix based), you can run SQL Server for Linux on your Mac. The way to do this is to run SQL Server on Docker.

So let's go ahead and install Docker. Then we'll download and install SQL Server.
